## **PERSPECTIVE**

Industrialization occupies very important position in meeting the basic human needs and desires. The growth of industry will continue to be faster, year after year in view of the recent industrial policy of liberalization and globalization in the country. The increasing sophistication of modern industry may generate inherent hazards associated with hazardous industrial processes/operation.

Industrial Hygiene Technique is an essential component to prevent occupational diseases or injuries through recognition, evaluation, and to control all industrial workplace pollutants/stresses. Providing a safe and healthful workplace benefits both employees and employers by improving health, morale and productivity. The extent of an Industrial Hygiene depends upon the nature of the operation/process, the material (raw, intermediate, finished and bye-products etc.), and the equipments used and the type of hazards the operation generates.

With this objective, this three-day Training Program has been designed.
